

## Torus

Designate a piece to use this power (traditionally blue). This piece treats the board as if it wraps around horizontally. That is, if the Torus piece is on the edge, it can move to the opposite edge of the same row, and can jump similarly. Further, when this piece encounters an edge moving forward, it may move forward as if it were in the opposite spot on its row (illustrated below).

## Caboose

If three or more of your nonwhite pieces line up in a row, you can use your turn to advance all the pieces one step in the direction of the line.
